ENGINEERING MODE AFE ADJUSTMENT

<https://www.f150forum.com/f129/22-f150-fuel-economy-screen-way-off-true-usage-actual-pumped-gas-532614/index2/#post7325804>

The instructions I have predate Gen14. The item you are looking for is called "AFE Bias". Set the bias to 1000 for factory default.

$1000 * \text{Actual MPG} / \text{Displayed MPG} = \text{the new value to enter}$

But if 1000 is not the current value then substitute whatever you find currently set. I strongly suspect you will not find 1000 is the current value. If not, then for fun do the math to estimate what it would display if 1000 was used.
